

PREVENTIVE AND CURATIVE ACTIVITY FOR MAXIMUM DISEASE CONTROL

Helmstar Plus SC is a premier fungicide containing the industry's most powerful systemic active ingredients. With preventive and curative activity, Helmstar Plus SC quickly decreases disease infection while providing a residual barrier against any newly forming diseases.

Capable of controlling the most devastating diseases in corn, soybeans, peanuts and wheat, Helmstar Plus SC reduces plant stress while promoting better yields and ROI.

HELMSTAR PLUS SC

SIMPLIFIED MANAGEMENT

Helmstar Plus SC offers seamless flexibility when implementing disease control strategies within a single growing season across multiple crops.

TWO MODES OF ACTION

1) Strobilurin Fungicides

Preventive Control

Azoxystrobin is a strobilurin fungicide which prevents spore germination and disease penetration into the plant.

2) Triazole Fungicides

Curative Control

Tebuconazole is a triazole fungicide which is highly active on growth of fungi with limited activity on the spores.

PERFORMANCE BENEFITS

- Single solution with superior value across multiple crops.
- Convenient premix of two complementary modes of action.
- Preventive and curative activity for improved protection.
- Optimizes plant health for greater yield potential and ROI.

| | |
|--------------------------|--|
| Brand Name | Helmstar Plus SC |
| Category | Fungicide |
| Active Ingredient | Azoxystrobin + Tebuconazole |
| Crops | Barley, corn, peanuts, soybeans, wheat |
| Site of Action | Group 11 / Group 3 |
| Formulation | Suspension concentrate |
| AI/Gallon | Azoxystrobin: 1.0 lb a.i./gal; Tebuconazole: 2.0 lb a.i./gal |
| Applications | Foliar broadcast |
| Rates | 7.2–13.0 fl oz/A (see label for rates by crop) |
| Disease Spectrum | Row crop diseases |
| Signal Word | Warning |

APPLICATION RATES AND GUIDELINES

| | Corn | Peanuts | Soybeans | Wheat |
|---------------------------|---|---|--|---|
| Key Diseases | Gray Leaf Spot N/S Corn Leaf Blight Eye Spot Rust (<i>Puccinia</i> spp.) Physoderma Brown Spot | Rhizoctonia White Mold Early/Late Leaf Spot Web Blotch | Frogeye Leaf Spot Brown Spot Powdery Mildew Soybean Rust | Septoria Leaf Powdery Mildew Tan Spot Head Scab* |
| Rates | 7.2 - 10.8 fl oz/A | 13.0 fl oz/A | 7.2 fl oz/A | 7.2 fl oz/A |
| Application Timing | V5-V8 as an early application and later to corn at VT. | First site of disease, 35 to 40 days after planting. | R1-R5 or anytime between 1st flower & visible seeds in the pod. Repeat 10 to 14-day intervals. | Prior to disease onset until late head emergence. |

* Suppression

CORN YIELD TRIAL

2015. Dixon Springs, IL. Applications: V5 (Jun 29); R1 (Jul 21). Harvest: Oct 20.
No significant differences.

SOYBEAN YIELD TRIAL

2015. Dixon Springs, IL. Applications: R3 (Jul 31). Harvest: Oct 16.
Inoculated with Qo1 resistant Frogeye Leaf Spot.
